## **Windows 8.1 Update**

A few of you are being burdened by the Windows 8.1 Update pop-up. The reason I can't provide instructions for the update is something generally stops working afterward. Additionally, there are 15 questions that need to be answered after the update. These questions dictate what and how your computer shares information with Microsoft.

If you would like me to perform the update I would recommend scheduling an In-shop Tune-up the next time you need one. The Tune-up Special is usually \$100 - \$150. The Update takes at least 3 hours. I can perform both at the flat rate of \$150 and generally can complete the job overnight minimizing down time.
